

a package to visualize and comprehend the full curvature of random forests

Søren H Welling, Line K Clemmensen, Lars Hovgaard, Per Brockhof, Stephen T Buckley, Hanne F Refsgaard

A supervised explorative analysis with RF

Unknown system

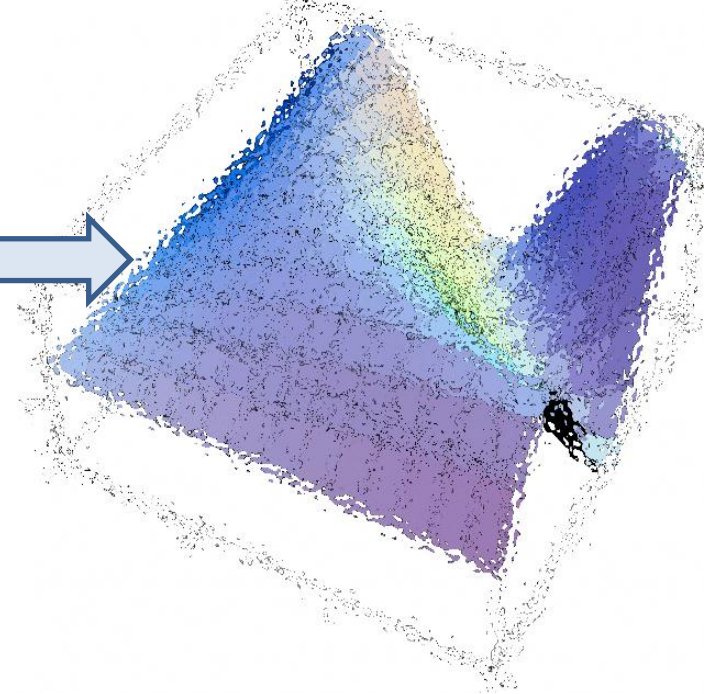

Sample data

Sample No.	Thickness (m)	Temperature (°C)	Concentration (g/L)
1	2.1740228	82	0.066
2	1.8774501	77	0.071
3	1.8774704	77	0.072
	1.9762727	79	
	2.0266303	80	
	2.0994529	81	
	1.9468132	78	0.067
8	1.8972298	77	0.071
9	1.9169798	77	0.07
10	2.0692626	80	0.066
11	2.1292363	82	0.067
12	2.0479427	80	0.067
13	2.0479598	80	0.069
14	1.8972463	77	0.071
15	1.8774795	77	0.066

Train RF

Look at mapping

Choose target!

Visualizing mapping

Dimensions needed = nvar + 1

Dimensions needed = nvar + nclasses - 1

Part 2 – how forestFloor works

- Decision trees for dummies
- Feature contributions
- It is all about context!

Two variables, one target, one grand mean(n1)

... and residuals of the grand mean

Best split of n_1 by x_2 ...

Best split of n_2 ...

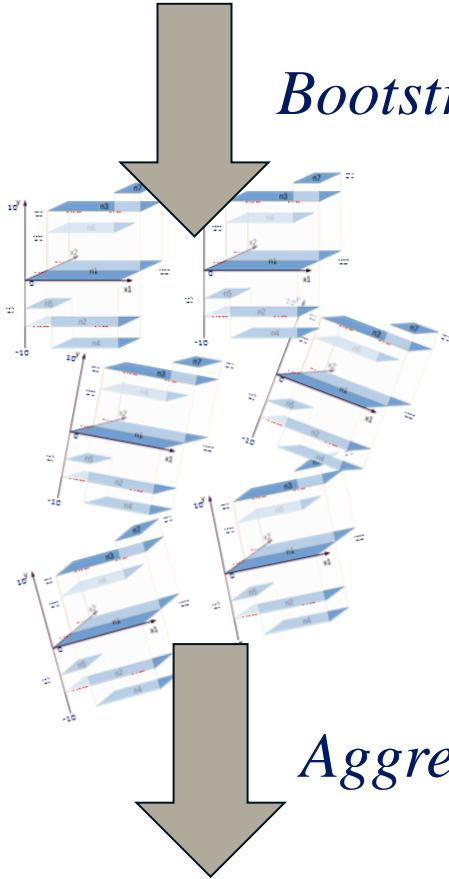

Best split of n_3

Training data

Bootstrap and train many trees

Forest

Aggregate models by voting

Robust predictions

F, Feature contributions

F is a decomposition of the predicted targets...

$$\hat{y}_i = \bar{u}_0 + \sum_{j=1}^{nvar} F_{ij} = \bar{u}_0 + F_{i1} + F_{i2}$$

y target

ith sample

jth variable out of nvar

...how to compute F for a whole forest

$$F_{ij} = \frac{1}{ntree} \sum_{k=1}^{ntree} \sum_{l=1}^{nnodes_{ik}} L_{ij_{kl}}$$

kth tree

lth node in the unique pathway of ith sample in the kth tree

Part 3

Plot feature contributions

How to learn this hidden function?

$$y = f(X) = (x_1)^2 + \sin(x_2) + (x_3 \cdot x_4) + 0x_5 + 0x_6$$

A explorative analysis with RF

Unknown system

Sample data

Sample No.	Thickness (m)	Temperature (°C)	Concentration (g/L)
1	2.1740228	82	0.066
2	1.8774501	77	0.071
3	1.8774704	77	0.072
	1.9762727	79	
	2.0266303	80	
	2.0994529	81	
	1.9468132	78	0.067
8	1.8972298	77	0.071
9	1.9169798	77	0.07
10	2.0692626	80	0.066
11	2.1292363	82	0.067
12	2.0479427	80	0.067
13	2.0479598	80	0.069
14	1.8972463	77	0.071
15	1.8774795	77	0.066

Train RF

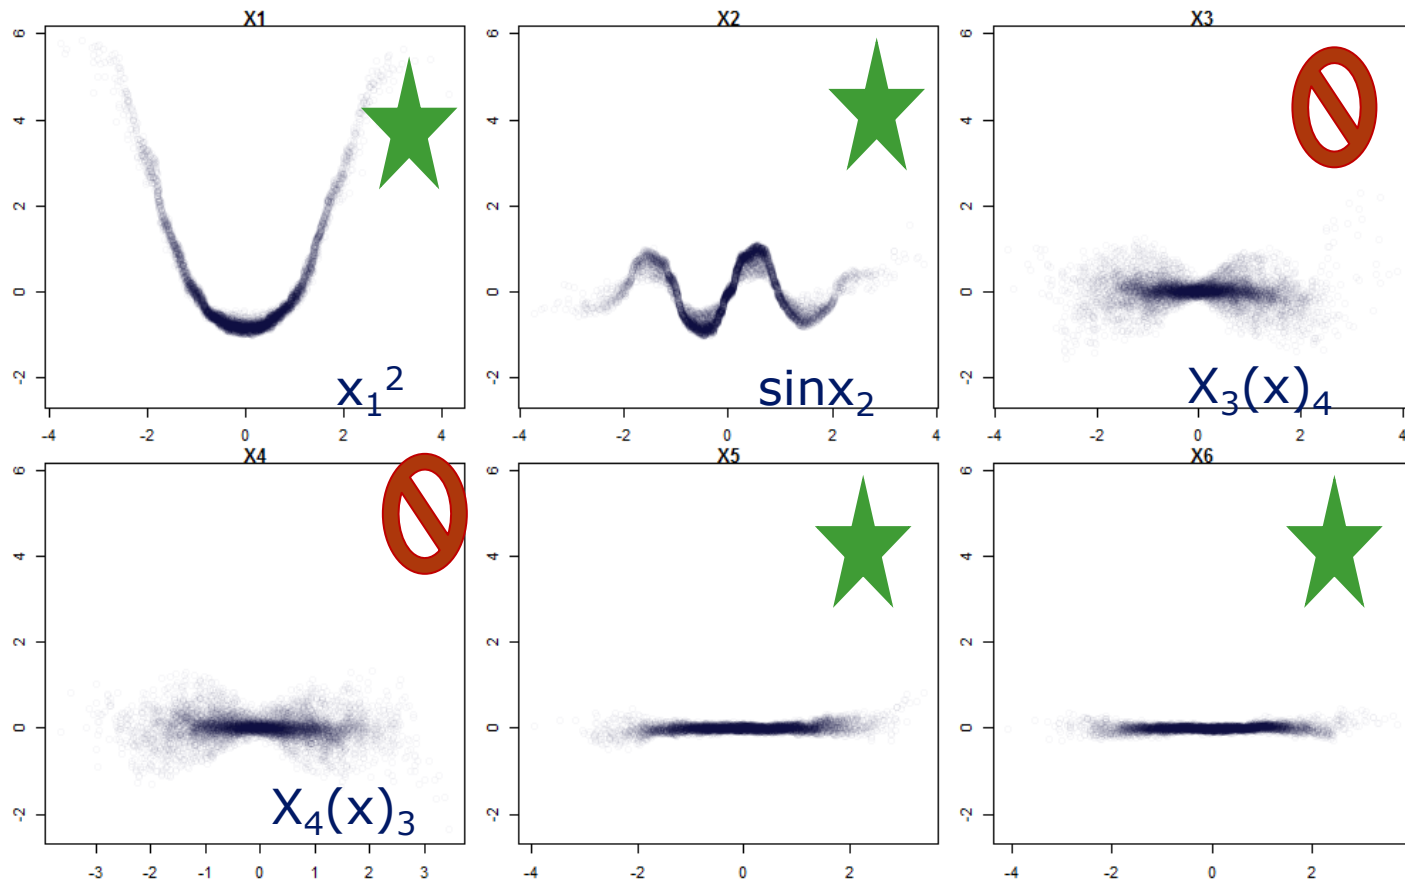

Look at mapping

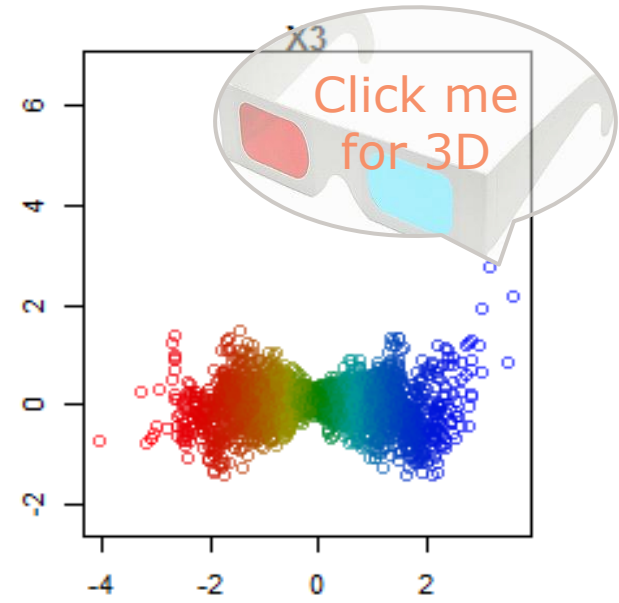

Choose target!

The solution is...

$$y = f(X) = (x_1)^2 + \sin(x_2) + (x_3 \cdot x_4) + 0x_5 + 0x_6 + \text{noise}$$

...rgl 3d plot, printed screens
