

R to Latex / HTML

Christophe Genolini

Bernard Desgraupe

Lionel Riou Fransca

Univariate & bivariate

- **Two kind of analysis**
 - **Univariate**
 - **Bivariate**
- **Two possible output**
 - **LaTeX**
 - **HTML**

Four functions

		Output	
		LaTeX	HTML
Analysis	Univariate	<u><code>r2latexUniv</code></u>	<u><code>r2htmlUniv</code></u>
	Bivariate	<u><code>r2latexBiv</code></u>	<u><code>r2htmlBiv</code></u>

r2latexUniv

Automatic dispatch

- According to the type of variable
 - Logical
 - Factor (3 or +)
 - Ordered
 - Discrete
 - Continuous

Automatic dispatch

~
ordered)

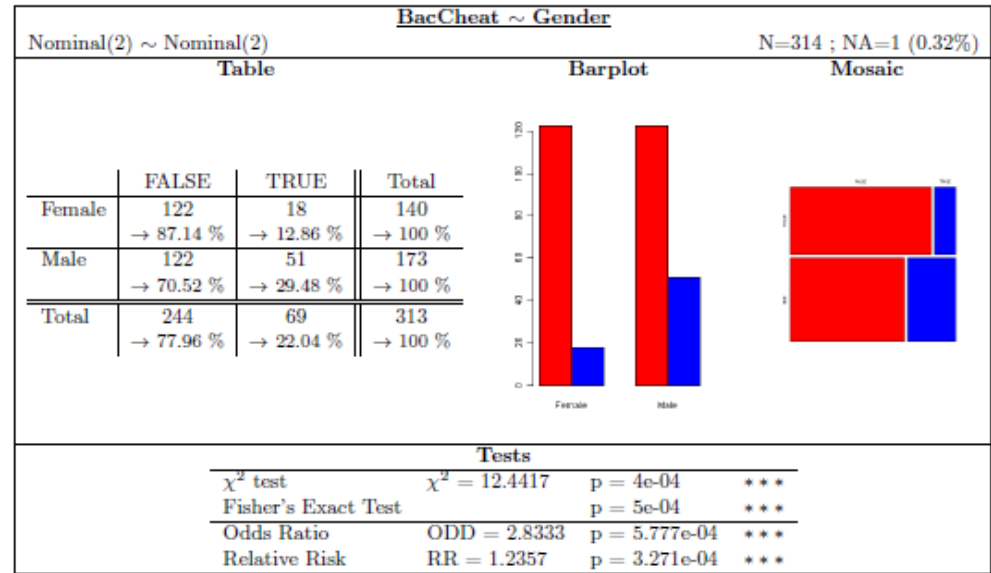

r2latexBiv

(logical

~

data.frame)

Example of code

Very simple code

```
### Read the data
```

```
myData <- read.csv(...)
```

```
### Preparing ordered variable(s)
```

```
myData$YearOfStudy <-  
  ordered(myData$YearOfStudy,...)
```

```
### Univariate analysis
```

```
r2latexUniv(myData[,c(3,9:18,22)])
```

```
### Bivariate analysis
```

```
r2latexBiv(myData[,22]~myData[,c(3,9:18)])
```

Thank for your attention
