

Introduction to S programming: a teaching experience and a manual

Who? Vincent Goulet

From? École d'actuariat, Université Laval
Québec, Canada

The teaching experience

Audience

- First year Actuarial Science students
- Goal is to learn the **programming language**, not the statistical software
- Second programming language (after VBA)

Constraints

- Large group of students (around 80)
- Limited access to computer labs
- Very little time devoted to the topic (4 weeks)

The teaching experience

Audience

- First year Actuarial Science students
- Goal is to learn the **programming language**, not the statistical software
- Second programming language (after VBA)

Constraints

- Large group of students (around 80)
- Limited access to computer labs
- Very little time devoted to the topic (4 weeks)

The lab: to go or not to go?

Pros

- Hands-on approach to learning
- Variable pace per student
- Lab work can be done at home

Cons

- "Theory" difficult to teach
- Easy for students to do "something else"
- Limited number of PCs: some just watch

The lab: to go or not to go?

Pros

- Hands-on approach to learning
- Variable pace per student
- Lab work can be done at home

Cons

- “Theory” difficult to teach
- Easy for students to do “something else”
- Limited number of PCs: some just watch

My solution

Compromise

- Time spent in class
- Time spent in the lab

In class

- 1 hour per week
- Presentation of concepts, functions, etc.
- Basically no examples

In lab

- 2 hours per week
- Students mainly execute provided script files
- Some interventions by the instructor

My solution

Compromise

- Time spent in class
- Time spent in the lab

The manual: *Introduction to S programming*

What it is

- Collection of class notes and scripts
- Much influenced by chapters 1–3 of MASS
- Fully indexed
- Published under the GNU FDL

Also covers

- Optimization functions
- Linear regression
- Time series analysis
- Random number generation
- Efficient simulation
- Emacs and ESS
