In-database analytics with \( R \)

**Brian Hess\(^1\), Michele Chambers\(^2\)**

1. Brian is Principal Mathematician and Director of Advanced Analytics at Netezza
2. Michele is Director of Advanced Analytics Product Management at Netezza

**Keywords:** In-database analytics, data mining, scoring, high performance computing, parallel algorithms

In-database analytics is a hot topic and not typically associated with \( R \). Join this sessions to learn about the latest thinking in combing \( R \) and in-database analytics from the market leader in data warehouse appliances, Netezza. In this session, you’ll learn:

- What are in-database analytics?
- How does in-database analytics processing help you?
- Can in-database analytics be used for data mining as well as scoring?
- How can you take advantage of a massively parallel architecture to speed up embarrassingly parallel algorithms as well as heroic computations?

This session will highlight how Netezza partners and customers are using \( R \) along with in-database analytics to
